## **City of Columbus To Cut Brush and Improve Surfaces In Approximately 60 Miles of Alleys This Spring and Summer**

The City of Columbus this week started work to cut brush and improve the surfaces of approximately 60 miles of alleys in the Department of Public Service's 2011 alley improvements program, more than four times the 13.5 miles of alleys improved in 2010 and nine miles in 2009. A total of 423 alleys will be improved in the following areas:

- Clintonville
- East 5<sup>th</sup> Avenue-Old Leonard Avenue area
- Far East Side
- Hilltop
- Near East Side
- North Linden
- Ohio State University area
- South Side

The city performed the same work on 96 alleys in 2010 and only 41 alleys in 2009 in the midst of the city's budget crisis.

**"We're working to make alleys all over Columbus safer for our residents," said Mayor Michael B. Coleman. "Smoother alleys will also extend the lives of our refuse trucks and save money in maintenance costs."**

Improvements to alley surfaces, also known as surface treatment, include the filling of potholes with the same materials used to fill potholes on city streets. The alley surfaces are then covered with a mix of crushed stone and a tar-like liquid emulsion. Motorists can safely drive on alleys immediately after they are surface treated without damaging their vehicles.

**"Alleys are crucial elements that add to the charm and attractiveness to many of our neighborhoods," said Eileen Y. Paley, chair of the Public Service and Transportation Committee. "The City of Columbus will continue to invest in alleys and roads to make them stronger, safer, and easier to maintain."**

The number of alleys surfaced treated each year depends primarily on available funding in the Department of Public Service's Street Construction Maintenance Fund budget. The city will invest \$2.5 million in alley brush cutting and surface treatment in 2011, compared to \$206,550 in 2010 and \$138,984 in 2009.

The city has approximately 2,000 miles of alleys. Alley surface treatments on all city alleys are done on a regular rotation that takes five to seven years to complete. However, all city alleys are checked annually to determine whether work needs to be scheduled. Some city alleys are not surface treated because they are so flat that the work would cause flooding in abutting yards during rains.
